

Product Care and Maintenance

- Mystera® Acrylic Solid Surface is designed for years of service in countertop and shower wall applications, and is resistant to scratches and stains.
- To maintain Mystera® Acrylic Solid Surface, simply wash with warm soapy water and a soft cotton cloth, or use an ammonia based cleaner, then dry.
- For hard water blotchy buildups, use Soft Scrub to take the surface back to the original finish
- If a stain remains after cleaning, soak the area with concentrated soapy water or an ammonia based cleaner, and then wipe with a non- scratching cloth.
- More persistent stains can be removed with light rubbing in two different directions at a 90 degree angle, using a peach (1500 AO) Scotchbrite pad, then if needed to match the finish, continue with a blue (4000 AO) pad and then gray (12000 AO) pad.
- To maintain the finish of a semi-gloss or high-gloss surface, a product like Countertop Magic can be applied as required.
- While Mystera Acrylic Solid Surface is heat resistant, minimize direct heat exposure from hot pots and pans and appliances like toaster ovens, using a trivet or hot pad.
- Should strong chemicals spill onto the solid surface, flush the spill with water.
- Excessive force or pressure can damage solid surface countertops if not properly supported. Avoid standing or sitting on countertops.
